Art Unit: 2876

#### DETAILED ACTION

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### Specification

2. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

### Claim Objections

3. Claims 1 and are objected to because of the following informalities:

Claim 1, line 1, "-type" should be deleted.

Claim 2, line 2, "type" and line 4, "a" should be deleted.

Appropriate correction is required.

### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Application/Control Number: 09/937,020

Art Unit: 2876

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Balsom, US Patent No. 5,592,596, cited by the applicant, in view of the applicant admitted prior art (figure 1) and Arcotta, US patent No. 5,121,687, cited by the applicant.

Balsom disclose a system and method for automatic printing of storage media labels comprising: an optical disk cartridge storage and retrieval device 43 stores a number of optical disk cartridges, a first number of which have information stored therein, and which therefore have a media ID associated therewith, a selected one of this first number of optical disk cartridge may be inserted into the hard disk drive (not shown) of the optical disk cartridge storage and retrieval device 43, for reading of such stored information; a controller 42 determines whether a label flag is associated with this selected optical disk cartridge, the label flag may include a signal or an embedded code, which indicates whether a label has previously been printed for this selected optical disk cartridge; a printer 50 to print a label for this selected optical disk cartridge, the label may include time information, including the date the label was printed, in order to facilitate organization of the optical disk cartridge (see figure 2 and col. 5, line 42+).

Balsom fails to disclose or fairly suggests the following:

A- the cartridge has a programmable memory device attached the its housing.

B- the label is printed directly on the cartridge.

The applicant admitted prior art meets limitations A (see figure 1 and page 11, line 13+).

Arcotta meets limitations B.

Application/Control Number: 09/937,020

Art Unit: 2876

In view of the prior art's teachings, it would have been obvious for an artisan to modify the system of Balsom to employ a cartridge having a programmable device attached thereon for identify the cartridge. Such modification would provide greater storage space to store additional information to effectively identify the cartridge, which would make the system more reliable. Therefore, it would have been an obvious extension as taught by Balsom.

In view of Arcotta's teachings, it would have been obvious for an artisan at the time the invention was made to print the code directly on the cartridge of Balsom as modified to eliminate the need for tape, thereby render less complex and cost effective. Such modification would require less maintenance, which would make the system desirable. Therefore, it would have been an obvious extension as taught by Balsom as modified by the prior art.

# Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Rockwell et al, US Patent No. 6,138,909, disclose a media handling system and method. Kou, US Patent No. 6,027,019, discloses a component feeder configuration monitoring. Wooddruff, US Patent No. 5,498,116, disclose an entry-exit port for cartridge library. Sibuaya et al, US Patent No. 5,581,522, disclose a library apparatus having accessor with bar code reader, which rotates at a different horizontal position when reading a bar code failed at a first position.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel St.Cyr whose telephone number is 703-305-2656. The examiner can normally be reached on Mon-Fri.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Michael G Lee can be reached on 703-305-3503. The fax phone numbers for the
